

Comp 2005: Software Engineering
Group Project
Iteration 1 Individual Contribution Log.
Tyler Morgan

During Iteration 1 of the group project I helped to organize an in person group meeting on Saturday, Jan. 28. The meeting was productive and we allocated the iteration 1 workload. I contributed one fully dressed use case description (Take a Turn) with an accompanying UI Prototype, as well as a single brief use case description (Screen Time Advisory). For iteration 2, I intend to further refine the 'Take a Turn' use case, tackle another fully dressed use case, and begin work on implementing an initial release of the project. I will take on more tasks if necessary.
